

# Bearder test drives new Eco-Mini

Lib Dem Euro MP Catherine Bearder recently took a spin round Oxford in a new eco-Mini to see how the car industry is working to tackle climate change.

Catherine explained, “The Mini-E is an electric car that produces no carbon emissions. Electric cars like this are a central part of creating the zero-carbon future the Lib Dems are fighting for locally, nationally and in Europe.

“The Mini-E will be a model for future generations of clean city cars. It’s fantastic that a car manufacturer the size of BMW is leading the way on helping to reduce climate change.”
